## New Fixture Flushing Tracking Sheet

This document may be used or one may be prepared for the purpose of tracking new fixture flushing. Submittal is not required, however the Written Directives PIN 21-21-CCP, section 10705(b)(2) requires Child Care Centers to retain a tracking sheet on file.

Instructions: Post this sheet near each newly replaced fixture. Fill in the installation date, the fixture identification label (located on the LIC 999 Facility Map), and facility license number. Attach an identification label to the new fixture. Flush the fixture for at least 30 seconds, 4 times a day, for at least 3 weeks. Continue flushing past the 3 weeks until the fixture is prepared for sampling 8–18 hours before your sampler arrives. Keep a copy on file.
